Experience

Korean Surgical Researcher Foundation , AI Researcher • K-QIPS Research Analysis • Korean-style Medical Large Language Model	Seoul, Korea 2025.02 – Currently
Lablup Inc. , AI Research Assistants • Contribute to the research team • Developed ground truth data pre-processing module • Predictive modeling of respiratory infectious disease transmission risk based on ground truth data of droplet spread • Data augmentation modeling using GAN • Seminar LINK	Seoul, Korea 2022.06 – 2022.09

Projects

119 Intelligent report reception voice recognition data construction • building data pre-processing and analytics pipeline for speech recognition • modeling dispatch decision-making for decision aids for guard officers • Tools Used: Pyhon, SQL	2023.09 - 2024.09
Emergency and Critical Patient Classification Using EMR Data • Designed a model to classify emergency and critical patients using emergency department EMR data. • Pre-trained the language model using clinical notes collected from real hospitals. • we additionally utilize clinical note (text) information to utilize the most potential information. • By combining tabular encoder and text encoder at the embedding level, we achieved better performance than existing models.	2023.04 - 2024.09
Optical Character Recognition (OCR) model improvements • AI Competition Organized by Software Center University • Using Pororo as a baseline, we improved it by utilizing data augmentation and adding the Mix-Style module. • As a result, the team ranked at the top of the leaderboard and won an honorable mention.	2022.09 - 2023.02
